MBI - Market Behavior Investigation Handbook & Philosophy

"I am not a financial advisor. Nothing in this session, PDF, or communication should be interpreted as advice to buy, sell, or hold any financial instrument. All content is educational and focuses on behavior, environment, and market structure. You are solely responsible for your own trading and investment decisions.....And Yes, this writing is composed by both Microsoft Copilot and Myself(24%)."

Author - casterDjack Owner

Creator of the Haugen Engine, Market Behavior Investigation (MBI) Framework, and the Market Quality Forecasting System. Behavioral systems architect, session-based market analyst, and designer of the Triple MACD momentum architecture.

System Architecture & Research

- Market Environment Modeling
- Liquidity & Volatility Scoring
- Session Quality Framework
- Regime Classification Engine
- Triple MACD Momentum Architecture
- Sentiment Fusion Model
- Behavioral Leak Classifier
- 7-Day Environmental Forecasting Model
- Cross-Market Intelligence Layer

Editorial & Structural Integration

Synthesis of 20+ internal documents, including:

- The Haugen Dashboard
- The Human Handbook
- The Strategy Report Analysis
- The Triple MACD System
- The Market Quality Forecasting Model
- The Session Architecture
- Macro Avoidance Rules
- Sentiment + Haugen Fusion
- Trade Call Analysis
- Engine Mode Logic
- Rhythm Alignment
- Behavioral Finance Research
- “Explain Like You’re 5” Layer

Special Thanks

To the traders, clients, and early testers whose questions, mistakes, and breakthroughs shaped the behavioral layer of this system.

To the global market sessions — London 1 and NY PM — for revealing the structure that made this engine possible.

TIER 1 – “FREE MODE” (Simple, Public, Beginner-Friendly)

Tier 1 is **NOT** the OS.

Tier 1 is the **public-facing, lightweight version**.

It uses:

- the chart
- the indicator
- the basic readings
- the simple ON/OFF logic

The easiest explanation I can provivde at the moment....

Tier 1 = The 4-Reading System:

From your screen during live, Tier 1 becomes:

1. Structure (Simple Version)

- **Behavior:** Compression / Pullback / Volatility Spike
- **VolBleed:** Low / Medium / High
- **LiqSync:** Strong / Mixed / Weak
- **RegSync:** Range / Mixed / Trend Pressure
- **Macro:** Clean / Shock

Tier-1 rule:

If Structure = Trend Pressure or Macro Shock → **NO TRADING.**

2. Tri-Market (Simple Version)

- Score: 0–100
- Regime: Blackout / Caution / Good / Prime
- BTC HS
- DXY HS
- WTI HS

Tier-1 rule:

If Tri-Market Score < 25 → **GLOBAL BLACKOUT → STOP.**

3. Environment (Simple Version)

- Liquidity
- Volatility
- Session Q
- Haugen
- 3% Rule

Tier-1 rule:

If Liquidity < 3 or Volatility < 2 → **NO TRADING**

4. Execution Rules (Simple Version) - (MACD/RSI)

- ✓ EMA20 > EMA200 → Only look for longs
- ✓ EMA20 < EMA200 → Only look for shorts
- ✓ EMA20 crossing → No trades
- ✓ MACD must not be red

If MACD is red → **STOP.**

✓ RSI must not be extreme

- RSI < 30 → too oversold → STOP
- RSI > 70 → too overbought → STOP

✓ Must be inside a valid session

- London 1
- NY PM

If outside these → **STOP.**

Tier-1 Execution Summary

If:

- EMA zone is clean
- MACD is not red
- RSI is not extreme
- Session is valid

→ **Execution = OK**

If ANY fail → **STOP.**

OPERATOR CARD/ CHEAT SHEET

YES.....YOU CAN
USE THIS DURING
LIVE SESSIONS.

The simple, public, beginner-friendly layer of the Haugen System.

Tier 1 has **4 Panels**

1. **Structure**
2. **Tri-Market**
3. **Environment**
4. **Execution**

If ANY of the four fail → **STOP.**

1. STRUCTURE

Structure tells you how the market is behaving *right now*.

STOP if:

- Behavior = Trend or Compression
- RegSync = Trend Pressure
- Macro = Shock
- VolBleed = High
- LiqSync = Weak

If Structure is unstable → **STOP.**

2. TRI-MARKET

Tri-Market tells you if BTC, DXY, and WTI are aligned.

STOP if:

- Tri-Market Score < 25
- Global Regime = GLOBAL BLACKOUT
- BTC HS = 0
- DXY HS = 0
- Correlations contradict

If Tri-Market is unstable → **STOP.**

3. ENVIRONMENT

Environment tells you if the market has enough fuel.

STOP if:

- Liquidity < 3
- Volatility < 2
- Session Q = 0
- Haugen = 0
- 3% Rule = NO

If Environment is weak → **STOP.**

4. EXECUTION

This is the missing piece — the simple, public execution layer.

Tier-1 Execution is:

- A **basic, visible execution filter** that anyone can understand.
- **Tier-1 Execution Reads ONLY: EMA20 vs EMA200**
- **MACD direction**
- **RSI zone**
- **Session window (London and NY)**

That's it.

THE COMPLETE

TIER-1 FLOW

1. STRUCTURE → OK?

If NO → STOP.

2. TRI-MARKET → OK?

If NO → STOP.

3. ENVIRONMENT → OK?

If NO → STOP.

4. EXECUTION → OK?

If NO → STOP.

“This is an educational behavioral diagnostic. I do not provide financial advice or trade recommendations.”
